## **Technology used**

### **→HTML**

The Hyper Text Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript. Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a web page semantically and originally included cues for the appearance of the document. HTML elements are the building blocks of HTML pages. With HTML constructs, images and other objects such as interactive forms may be embedded into the rendered page. HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes, and other items. HTML elements are delineated by tags, written using angle brackets. Tags such as `<img>` and `<input>`. Other tags such as `<p>` surround and provide information about document text and may include other tags as sub-elements. Browsers do not display the HTML tags but use them to interpret the content of the page.

### **→CSS**

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML (including XML dialects such as SVG, MathML or XHTML). CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript. CSS is designed to enable the separation of content and presentation, including layout, colors, and fonts. This separation can improve content accessibility; provide more flexibility and control in the specification of presentation characteristics; enable multiple web pages to share formatting by specifying the relevant CSS in a separate .css file,

which reduces complexity and repetition in the structural content; and enable the .css file to be cached to improve the page load speed between the pages that share the file and its formatting

## About Project

### 1.) Title of the project

Online food and pharma services  
“ FRESH.SHOP”

### 2.) Objective of project

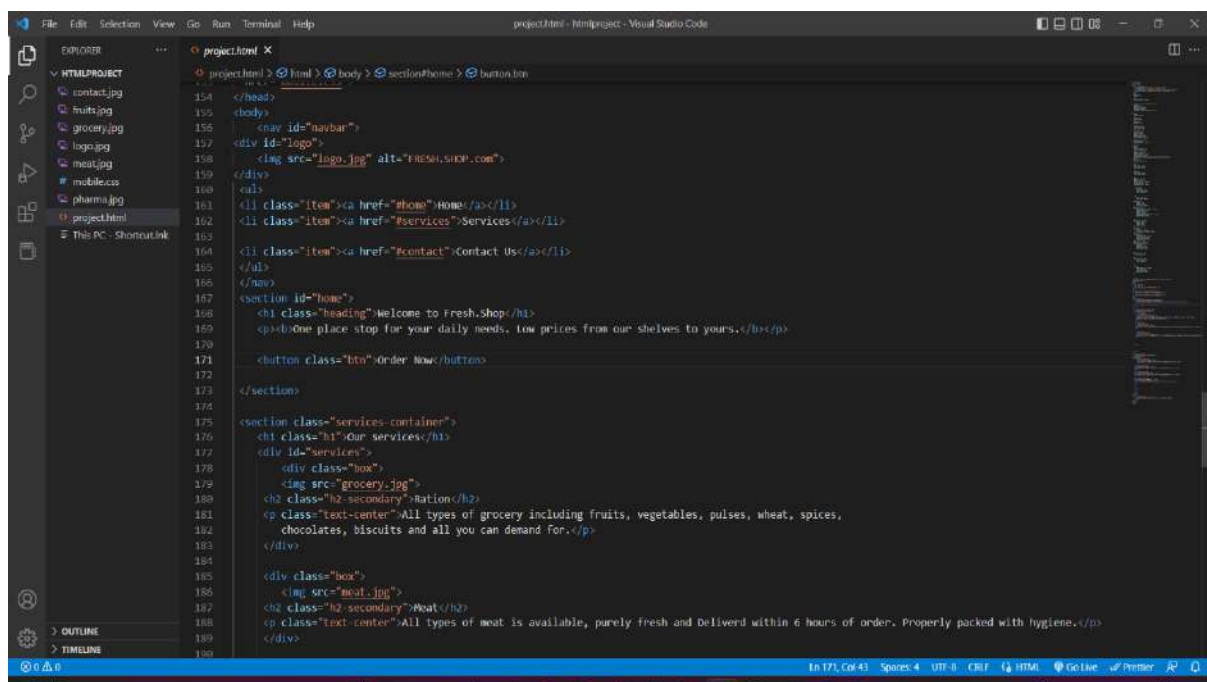

In this project we have to design a web page by using html and css . The project includes the detail of home, services that is provided by the fresh. shop, contact details, etc

### 3.) Briefly Description of project

We have used the languages like HTML, CSS

Some snapshots of codes in HTML

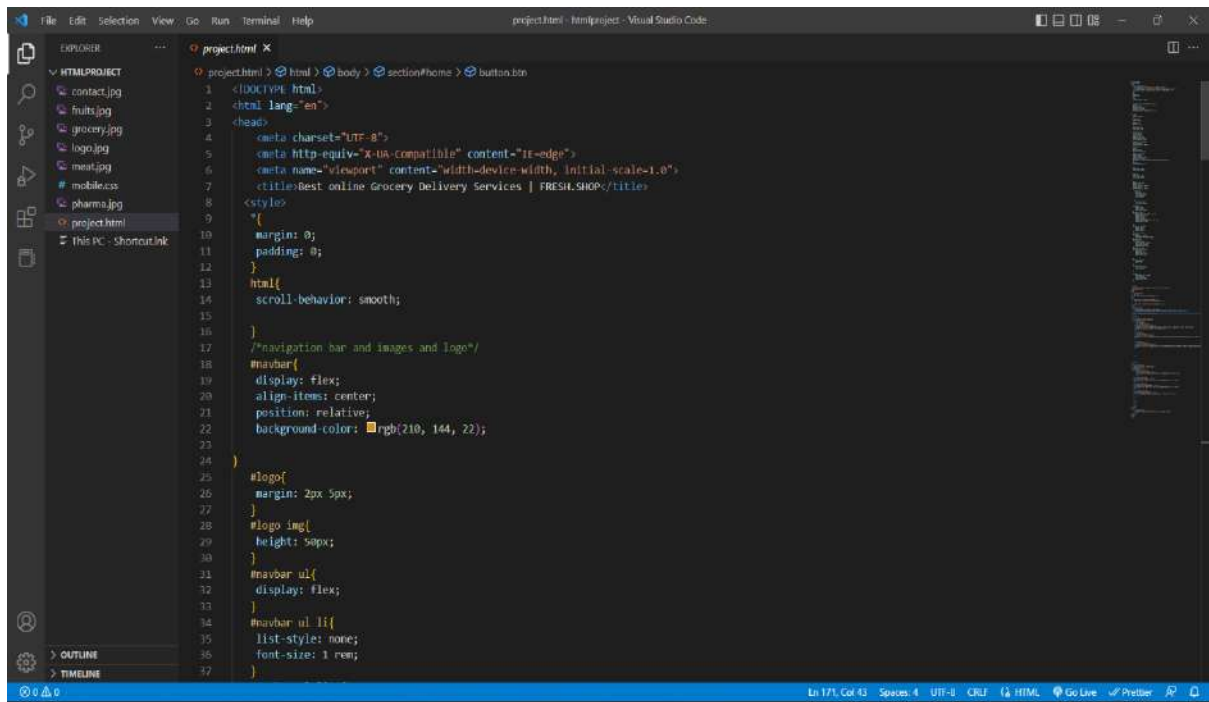

→HTML

A screenshot of the Visual Studio Code editor interface. The Explorer sidebar on the left shows a file tree for 'HTMLPROJECT' containing files like 'contact.jpg', 'fruits.jpg', 'grocery.jpg', 'logo.jpg', 'meat.jpg', 'mobile.css', 'pharma.jpg', and 'project.html'. The main editor area displays the code for 'project.html'. The code includes a navigation bar with links for Home, Services, and Contact Us. It also features a 'home' section with a heading, a paragraph, and an 'Order Now' button. A 'services-container' section follows, listing 'grocery' and 'meat' services with images and descriptions. The status bar at the bottom indicates 'Ln 173, Col 43', 'Spaces: 4', 'UTF-8', 'CR LF', and 'HTML'.
